SUMMARY

Experienced and Adaptable Software Developer with 3 years of expertise in JavaScript, HTML, CSS, React.js, APIs, and middleware. Dedicated to leveraging my skills to deliver robust and efficient solutions within an innovative organization.

PROFESSIONAL EXPERIENCE

Systems Engineer (TCS)   Dec '21 - Present

- Developed and maintained robust middleware components and APIs for seamless, secure, and reliable communication between multiple systems, ensuring high-performance and scalability.
- Integrate and Collaborate with cross-functional teams, including analysts, architects, and business stakeholders, to gather integration requirements and design efficient solutions.
- Troubleshot and resolved integration issues promptly, minimizing downtime and ensuring high availability of services.
- Served as the Single Point of Contact (SPOC) for production issues, effectively coordinating with cross functional teams to prioritize, investigate, and resolve incidents promptly.
- Conducted thorough root cause analysis for critical incidents, identifying underlying causes and implementing preventive measures to minimize future occurrences.
- Created user friendly website using React,Node,Mongodb and thymeleaf to test API services running on multiple instances to ensure 100% availability of service and reducing the validation time from 1-2 hours to just 15-20 minutes.
- Optimized multiple queries in the API backend, leading to a significant reduction in response time for various services and improved service performance by 25% percent.

EDUCATION

Computer Science & Engineering(B.E)   Jul '17 - Jun '20

PSG college of Technology

PROJECTS

Grocery Management Website

- Generated for customer to add an daily essential based on user needs.By checking your product data is up-to date,new products are added to the web store, old products are removed,to remember the missing products.
- Additionally, the system should provide analytics and reporting capabilities to help identify trends, popular products, and areas for improvement

OSTELLO MANAGEMENT SYSTEM

- Created a hostel application management web app to track students where they are, note the attendance of students according to room No and download data of attendance for each day.
- The app also allows administrators to generate detailed reports on student attendance, occupancy rates, and other key metrics to aid in managing the hostel efficiently.

SKILLS

*Programming Languages : JavaScript,Reactjs,HTML,CSS,Nodejs,Php,Core java,Bootstrap,Jquery.

*Database : Oracle,MongoDb,Sql.

*IDEs and Build Tools : Eclipse,VSCode,Postman,Git.
